PROFESSIONAL SUMMARY

Analytical and detail-oriented Entry-level Software Engineer with a B.S. in Computer Science and over 2 years of technical experience in systems engineering and software support. Proficient in Java, Python, and SQL with a strong foundation in Object-Oriented Programming (OOP) and Git-based version control. Proven track record in developing data workflows and maintaining complex software-controlled systems within fast-paced environments.

TECHNICAL SKILLS

Programming Languages: Java, Python, SQL, Object-Oriented Programming (OOP), JavaScript, TypeScript, PHP, C++, HTML, CSS
Frameworks & Libraries: React, Flask, Bootstrap, Tailwind CSS, Vite
Tools, Platforms & Infrastructure: Git, GitHub, Docker, AWS, Linux/Bash, Firebase Auth, Firestore, MySQL, Jira, TestRail, Selenium
Methodologies & Specializations: CI/CD, Agile/Scrum, REST APIs, CRUD, Retrieval-Augmented Generation (RAG), Software Development, Systems Engineering

SOFTWARE PROJECTS

PrimeOrbit | Lead Generation & Website Audit Platform | PrimeOrbit | 2026

- Built a full-stack PHP, MySQL, JavaScript, and Bootstrap platform to manage leads, audit business websites, and organize personalized outreach.
- Implemented live website analysis with cURL and HTML parsing, calculating 0–100 scores for SEO, conversion, trust, and technical factors.
- Integrated search and domain-enrichment REST APIs for contact discovery; built asynchronous dashboards and Smartlead-compatible CSV exports.

Promofly | Marketing Automation SaaS | Promofly | 2026

- Developed a React/Vite web application backed by Firebase Authentication and Cloud Firestore to submit, manage, and track promotional campaigns.
- Implemented role-based access, admin approvals, real-time status updates, and database CRUD operations; built analytics dashboards with Recharts.
- Optimized frontend components and Firestore queries to reduce initial page-load times by approximately 30–40%.

L-CHI | AI-Powered History Search Application | Senior Capstone | 2024

- Led frontend development of a Python/Flask application that uses retrieval-augmented generation (RAG) and an LLM to answer history questions from sources.
- Integrated Flask endpoints and Firebase Realtime Database for authentication, search, source management, and administrative features.
- Created and executed seven functional test cases with Selenium; used TestRail and Jira to document defects and validate key workflows.

PROFESSIONAL EXPERIENCE

Wolverine Mailing Solution Group | Machine / Controls Technician | Detroit, MI | 2022–Present

- Troubleshoot Windows-based machine-control software and PLC-connected equipment to maintain high system availability and resolve critical technical faults.
- Analyze control-system behavior and diagnostic logs to support software updates for legacy production systems and reduce operational downtime.
- Maintain comprehensive technical documentation and provide support for systems integration to ensure adherence to modern engineering principles.

Global Tech | Software Engineering Trainee | Part-Time, Remote

- Develop JavaScript and SQL workflows using Object-Oriented Programming (OOP) to transform CSV/JSON data for QA analysis and internal tool development.
- Participate in peer code reviews using Git and manage software documentation throughout the development lifecycle.
- Support the implementation of modern software practices like CI/CD and Docker to optimize development capacity for legacy codebases.

EDUCATION

Wayne State University | B.S. in Computer Science | Detroit, MI | 2024
Wayne County Community College District | A.S. in Pre-Engineering
